Archaeological Conservation Summer Internships **Deadline: December 16, 2022**

The Agora Excavations Conservation Laboratory of the American School of Classical Studies at Athens is offering **two** Archaeological Conservation Internships for the **2023** summer excavation season. The Conservation Laboratory functions as an integral part of the American School of Classical Studies at Athens' Agora Excavations. Its aim is to support the excavations by providing services that contribute to the study and understanding of the site.

Interns will have an opportunity to treat freshly excavated archaeological finds and to participate in an active on-site conservation laboratory. Under the supervision and guidance of the Agora Conservation staff, interns will carry out general conservation duties including: examination and analysis of artifacts; documentation; cleaning; reconstruction; restoration; and photography of artifacts from the current excavation and from storage. In this way, interns will be able to work with a variety of materials including ceramics, stone, glass, copper alloys, iron, lead, bone and occasionally ivory and wood. An introduction to the re-treatment, preventive and long-term care of archaeological collections will also be provided.

Applicants must currently be enrolled in a graduate or equivalent conservation program, or they must have recently completed their studies in conservation. Successful candidates are required to obtain their own medical insurance for the duration of their internship. Successful candidates are also responsible for their travel arrangements to and from Athens, Greece and for arranging their own accommodation. A modest expense allowance, consisting of approximately 120 euros per week, and a housing allowance of 125 euros per week (up to 1000 euros for 8 weeks and upon submission of receipts) will be provided for each intern during their internship. Those persons who are already resident in their own accommodations in Athens are welcome to apply for the program and will receive the same expense allowance, although no refund for their housing is possible.

Internships may vary in length from 6 to 8 weeks and are undertaken from early June to early August. Applicants should indicate in their application their approximate preferred dates within this time frame. To apply, submit an online application at the address below. Applications require two confidential letters of recommendation, which will be solicited through the application portal and must arrive by the deadline, 16 December 2022.

For inquiries contact:

Maria Tziotziou, Head of Conservation

Email: maria@agathe.gr; Telephone: + 30 210 33 10 963

Applicants can expect to receive notification after 10 February 2023.
