AI and the Humanities

Increasingly, companies spearheading artificial intelligence technology are relying on those with humanities expertise to engage in discussions about the design and deployment of AI. Even governments are calling on humanistic expertise as AI-innovations disperse through societies.

What is the role of humanities in these spaces? What kinds of questions do humanists confront? Why is their expertise needed?

This workshop will guide you through real-life examples of AI problems that have benefited from the critical, interpretive, and analytical capabilities that humanities training can supply.

Virginia Dignum

Professor of Responsible Artificial Intelligence at the Umeå University, Sweden and Member of the United Nations Advisory Body on AI

March 5, 2025 at 12 noon

Performing Arts and Humanities Building, Room 216

Space is limited.
