Notes a mess?
Worried you won't be able to prepare properly for exams?

If you want the top grades demanded by your dream employer, you'll need richly detailed notes to revise from before exams.

The problem is that brilliant notes are seriously tricky to take. There's simply too much to do at once: listening, thinking, summarizing, scribbling away like a maniac... You might be left with notes that make little sense and miss out big chunks of important information.

Sonocent is your secret weapon for brilliant note taking

Sonocent's award-winning software has helped over 120,000 students at colleges including UC Berkeley and UCF take super useful notes from class. For many it's meant a big jump in GPA, often over a single semester*.

"I was really worried about my grade in the first class where I used Sonocent for note taking. But I ended up getting 96%, and I think a big part of that was down to the software."

Leah Nelson
Music major, Augsburg College, Minneapolis

How will Sonocent help me take brilliant notes?

Sonocent breaks the process of taking notes into manageable stages, enabling you to focus on listening and understanding in class rather than scribbling or typing. With the software, you can capture, edit, review, and utilize all your information on a topic in one highly visual and interactive workspace. The study resources you create will be a godsend in the lead up to exams and can also form the basis of assignments, research projects, presentations, and more.

Step 1
Record your class with Sonocent

- Open the software on your laptop or mobile device
- Import the professor's slides if they've been made available (desktop only)
- Hit the record button when the professor starts speaking
- When you hear something important mark it up in color (Sonocent visualizes phrases of recorded speech as editable chunks)
- Break your recording into sections whenever the professor moves on to a new topic

Step 2
Add more detail to create a super study resource

- Open your file on your computer
- Go straight to the moments you highlighted in class - no fast forwarding or rewinding
- Type notes alongside your recording or take dictations
- Add links to reference material and images from your computer
- Export your audio, text, and images as a text document, video, or music album and use for revision and assignments

87% of student users think that Sonocent has improved their grades**

Want to up your note-taking game and aim for higher grades?
